	REGULATIONS DEFINING THE SCOPE OF THE PROFESSION OF PHYSIOTHERAPY (R2301 - 3 DECEMBER 1976)					
	SCHEDULE					
	GENERAL RULES GOVERNING THE SCALE OF BENEFITS					
001	Unless timely steps (i.e. 24 hours prior to the appointment) are taken to cancel an appointment the relevant fee may be charged, but shall not be payable by medical schemes. Each case shall, however, be considered on merit and, if circumstances warrant, no fee shall be charged. Modifier 0001 to be quoted.					
002	In exceptional cases where the fee is disproportionately low in relation to the actual services rendered by the practitioner, the practitioner shall provide motivation for a higher fee and such higher fee as may be agreed upon between the practitioner and the scheme may be charged.					
003	Where a practitioner uses equipment which is not owned by that practitioner, a reduction of 15% of the relevant rate will be applicable. Modifier 0003 must be quoted when this rule is applied.					
004	In the case of prolonged or costly treatment, the practitioner should first ascertain from the scheme concerned whether it will accept financial responsibility in respect of such treatment, since the member may be subject to maximum annual benefits.					
005	After a series of 20 treatments in respect of one patient for the same condition, the practitioner concerned shall report to the scheme as soon as possible if further treatment is necessary. Payment for treatments in excess of the stipulated number may be granted by the scheme after receipt of a letter from the practitioner concerned, motivating the need for such treatment.					
007	Practitioners are reminded that a lower fee than that appearing in the scale of benefits shall be charged if the customary fee in the area is less than that charged. Reduced fees shall also be charged where the practitioner would have reduced his/her fee in private practice in particular cases. Prolonged treatment or exceptional cases should also receive special consideration in accordance with the usual medical practice.

008	The fee in respect of more than one procedure (excluding evaluation and visiting Items 407, 501, 502, 503, 507, 509, 701, 702, 703, 704, 705, 706, 707, 708, 801, 803, 901 and 903) performed at the same consultation or visit, shall be the fee for the major procedure plus half the fee in respect of each additional procedure, but under no circumstances may fees be charged for more than three procedures carried out in the treatment of any one condition. Modifier 0008 must then be quoted after the appropriate code numbers for the additional code numbers for the additional procedures to indicate that this rule is applicable.					
009	When more than one condition requires treatment and each of these conditions necessitates an individual treatment, they shall be charged as individual treatments. Full details of the nature of the treatments and the diagnosis or diagnostic codes shall be stated. Modifier 0009 must then be quoted after the appropriate code number to indicate that this rule is applicable.

Modifier 0013 must be quoted after the appropriate code numbers to show that this rule is applicable. Please note that although only some medical schemes accept responsibility for the payment of transport expenses, others do so in exceptional cases only.

	In calculating the GEMS Tariff, the following rounding method is used: Values R10 and below rounded to the nearest cent, R10+ rounded to the nearest 10cent. Modifier values are rounded to the nearest cent. When new item prices are calculated, e.g. when applying a modifier, the same rounding scheme should be followed. ALL GEMS TARIFFS ARE VAT INCLUSIVE.										
	This schedule is for the exclusive use of registered specialist radiology practices (Pr No “038”) and nuclear medicine practices (Pr No “025”). “025” practices may only charge the codes with a 3rd digit of 9. “038” practices may charge all codes except codes with a 3rd digit of 9. Practitioners registered as both radiologists and nuclear physicians may charge all codes. Neurosurgeons accredited by the RSSA may charge for the neuro-interventional studies at 100% of the published radiology rate subject to preauthorisation and this excludes equipment fees or any other claims for the same event.										
	This schedule must be used in conjunction with the Radiological Society of S A Guidelines. Please refer to the PET guidelines in Annexure D.

	CODE STRUCTURE FRAMEWORK										
	a. The tariff code consists of 5 digits i. 1st digit indicates the main anatomical region or procedural category. • 0 = General (non specific) • 1 = Head • 2 = Neck • 3 = Thorax • 4 = Abdomen and Pelvis (soft tissue) • 5 = Spine, Pelvis and Hips • 6 = Upper limbs • 7 = Lower limbs • 8 = Interventional • 9 = Soft tissue regions (nuclear medicine) • eg “Head” = 1xxxx ii. 2nd digit indicates the sub region within a main region or category e.g. • “Head/Skull and Brain” = 10xxx iii. 3rd digit indicates modality • 1 = General (Black and White) x-rays • 2 = Ultrasound • 3 = Computed Tomography • 4 = Magnetic Resonance Imaging • 5 = Angiography • 6 = Interventional radiology • 9 = Nuclear Medicine (Isotopes) eg: “Head/Skull and Brain/General x-ray” = 101xx iv. 4th and 5th digits are specific to a procedure/examination, e.g. “Head /Skull and Brain/General/X-ray of the skull” = 10100.

	GUIDELINES FOR USE OF CODING STRUCTURE										
	• The vast majority of the codes describe complete procedures/examination and their use for the appropriate studies is self-explanatory. • Some codes may have multiple applications and their use is described in notes associated with each code • Codes 00510 to 00560 (Angiography machine codes) may only be used by owners of the equipment and who have registered such equipment with the Board of Healthcare Funders/RSSA. • The machine codes 00510, 00520, 00530, 00540, 00550, 00560 may not be added to 60540, 60550, 70530, 70535 (Antegrade Venography, upper and lower limbs) • Where public sector hospital equipment is used for a procedure, the units will be reduced by 33.33%.										
	CONSUMABLES										
	• Contrast Medium • Prior to the implementation of Act 90, contrast will be billed according to the official 2004 RSSA reimbursement price list, without mark up. • After the implementation of Act 90, contrast medium will be billed according to the suppliers' list price, without mark up. • Angiography catheters, angioplasty balloons, stents, coils and other embolisation materials, guide wires and drains are to be billed at net acquisition cost, without mark up, until the implementation of Act 90.

	• All other consumables are to be billed at net acquisition price, until the implementation of Act 90. Thereafter Act 90 regulations apply. • The cost of film is included in the comprehensive procedure codes and is not billed for separately. • Appropriate codes must be provided for consumables.										
	GENERAL COMMENTS ON PROCEDURAL CODES										
	• All x-ray tomography codes are stand alone studies and may be used as a unique study or in combination with the appropriate regional study if done simultaneously. May not be added to 20130, 42110, 42115. • Setting of sterile tray is included in all appropriate procedure codes. • Where introduction of contrast is necessary e.g. sialography, arthrography, angiography, etc, the codes used for the procedures are comprehensive and include the introduction of contrast or isotopes. • The use of Doppler or Colour Doppler as an adjunct to a study (eg small parts thyroid) is included in the code for that study. • CT Angiography (10330, 20330, 32300, 32310, 44300, 44310, 44320, 44330, 60310, 70310, 70320) are stand alone studies and may not be added to the regional contrasted studies (see 10335, 20340, 20350, 44325 for combined studies). • Angiography and interventional procedures include selective and super selective catheterization of vessels as are necessary to perform the procedures.

	ANNEXURE D. PET GUIDELINES										
A.	**INDICATIONS**										
	For the purposes of this guideline, only established indications for PET-CT are included and this relates to the more common types of malignancies as seen in practice. While some of the less common forms of cancer may also yield advantages with PET-CT imaging, there is as yet insufficient published data to support the general use and these have been excluded in the list below. This situation may change as new research and information becomes available.

	1. Non-small cell lung carcinoma (NSCC) a. Primary diagnosis of lesions i. >10mm diameter lesions where conventional imaging and biopsy have been inconclusive. b. Staging especially where curative surgery is planned i. Evaluation of primary tumour (T-stage). ii. Suspected nodal disease or characterization of nodal disease iii. Suspected distal metastases of determining extent of metastases. iv. Solitary distal metastasis where metastatectomy is considered. PET-CT is used to exclude additional lesions which would preclude surgery. c. Investigation of suspected recurrence (restaging) i. Local or regional recurrence ii. Nodal or distal recurrence iii. Determine the extent of proven recurrent disease iv. Differentiate fibrotic mass from active disease d. All patients with proven carcinoma of the lung, who are considered for curative resection, should be imaged with PETCT prior to surgery. e. Current available literature confirms that PET-CT is more accurate than CT or PET alone for staging and restaging of NSCC.

All patients prior to commencing treatment as baseline, following diagnosis. ii. Indicated at completion of therapy to confirm complete response. c. Monitoring of response to treatment i. Numerous studies have confirmed that mid-treatment PET scans predict clinical outcome. ii. Prognostic value and role in modification of therapeutic regime. d. Investigation of residual or recurrent disease (restaging) i. Where conventional imaging is equivocal for residual disease ii. Suspected nodal recurrence. iii. Differentiating recurrent and residual disease from post-therapeutic fibrosis and scarring.

	3. Thyroid carcinoma a. Not indicated for primary diagnosis b. Staging i. Primary examination of choice is I-123 whole body scintigraphy. ii. Only indicated for differentiated and medullary carcinoma of the thyroid in patients with negative I-123, but with a high index of suspicion for nodal or distal metastases on cross sectional imaging or where whole body I-123 scan is equivocal. c. Investigation of residual or recurrent disease (restaging) i. Elevated thyroglobulin despite negative whole body scintigraphy for differentiated thyroid carcinoma. ii. Elevated calcitonin levels and equivocal imaging findings for medullary thyroid carcinoma. iii. Solitary distal metastasis where metastatectomy is considered. PET-CT is used to exclude additional lesions which would preclude surgery.

	4. Head and neck carcinoma a. Primary diagnosis i. There is little, if any, role for PET-CT in primary diagnosis of mucosal lesions. ii. Limited to identifying primary tumour in histologically proven metastatic squamous cell carcinoma in cervical nodes. b. Staging of the primary tumour prior to therapy i. Local nodes which are equivocal on CI (conventional imaging). ii. Suspected distal adenopathy iii. Suspected distal metastases iv. All patients where uni- or bilateral surgery is planned (may alter management and approach by up to 50% and is significantly more accurate than CT alone). v. Excellent sensitivity (95%) for local and distal nodal disease (specificity in local disease may be affected by physiological uptake). c. Investigation of residual or recurrent disease (restaging) i. Differentiating fibrosis and recurrence where routine imaging is equivocal and may reduce the number of equivocal findings by up to 50%. ii. Following neo-adjuvant therapy for re-staging. iii. Suspected local or distal recurrence. iv. Differentiating post-therapeutic changes from residual or recurrent tumours poses significant problems for CT and MRI. PET-CT is significantly more accurate than routine cross sectional imaging in this regard.

	7. Stomach carcinoma – GIST a. a) In GIST tumours FDG tracer uptake is established. i. Indicated to determine response to treatment as determined by tumour activity on PET-CT measuring tracer uptake (SUV). ii. Paradigm shift in assessing tumour responses to treatment. iii. Response to Imatinib (Gleevec) can be predicted with 18FFDG as early as 24h after commencing treatment and long before any change in tumour size is demonstrated on conventional imaging. iv. Baseline study before commencing treatment is essential to determine degree of tracer uptake for post-treatment comparison. b) Variable uptake of tracer in other stomach tumours, which is difficult to explain and to predict. Routine imaging is not supported in other types of stomach tumours, at this stage.										
	8. Testicular Carcinoma a. Complex histology and variable uptake of different histological sub-groups. b. Limited to seminoma and teratoma in the following cases: i. Evaluate residual mass to differentiate residual/recurrent tumour from fibrosis. ii. Suspected recurrence but normal or equivocal conventional imaging findings.

	9. Oesophageal carcinoma a. Not indicated for primary diagnosis b. Staging for nodal and distal metastases (90% accurate) i. Indicated for N-staging, particularly where there is suspected distal nodal disease or where conventional imaging is equivocal. ii. Indicated for M- staging where distal metastases are suspected. iii. Strongly indicated for patient undergoing curative surgery to exclude distal disease. c. Investigation of residual or recurrent disease (restaging) i. Restaging for patients who have undergone neo-adjuvant chemotherapy. ii. Suspected local or distal recurrent disease. iii. Differentiate post therapeutic fibrosis from recurrent or residual disease.

	10. Melanoma a. No role in primary diagnosis which is primarily a surgical/histological diagnosis. b. Staging is determined by depth of penetration of the primary tumour and presence of sentinel node at surgery i. Indicated for Stage 3 and 4 disease where there is a high incidence of distal nodal and metastatic disease. ii. Solitary distal metastasis on conventional imaging where metastatectomy is considered. PET-CT is used to exclude additional lesions which would preclude surgery. iii. Overall N and M staging is significantly more accurate than conventional imaging (97% vs 80%). c. Investigation of recurrent disease (restaging) i. Modality of choice for recurrent nodal and distal metastatic disease. ii. Differentiate post therapeutic fibrosis from recurrent or residual disease. d. PET-CT may alter management in up to 34% of patients with Stage III and IV disease.

	11. Ovarian carcinoma a. Most cases present as advanced disease. b. Recurrence is frequent and the overall 5-y survival for advanced disease is only 17%. c. Diagnosis and initial staging require a laparotomy as small peritoneal deposits may be difficult to demonstrate on imaging i. PET-CT is indicated where surgical or conventional imaging findings are equivocal for primary staging. ii. PET-CT is accurate for demonstrating nodal and distal disease. iii. Sensitivity is limited by size of peritoneal deposits. It is more accurate for macroscopic disease. d. Investigation of recurrent disease (restaging) i. Superior to CT and MRI for recurrence (92% sens. and 75% spec.). ii. Alternative to a second look laparotomy (presents significant cost saving potential). iii. Definite role for patients with rising tumour marker where conventional imaging is negative for recurrence.										
	12. Carcinoma of unknown primary a. By definition, unknown primary tumors are those that remain undetected after all diagnostic resources have been used. b. PET-CT may detect up to 57% primary tumours when conventional cross sectional imaging has been negative. c. PET-CT is indicated where conventional imaging has failed to identify a primary malignancy.

B.	**LIMITED VALUE AND RELATIVE CONTRAINDICATIONS**										
	These conditions are those where there is variable or poor uptake of the tracer FDG or where imaging is routinely performed with tracers other than FDG which are not locally available. This may result in false negative findings using FDG and the routine use of PET-CT should be discouraged.										
	1. Urological Malignancy a) No role in diagnosis and staging of renal cell carcinoma b) Prostate limited to suspected recurrence in histologically proven high grade tumours. Prostate is ideally imaged with Choline as tracer. c) No role for diagnosis and staging of bladder carcinoma 2. Broncho-alveolar cell carcinoma 3. Small cell carcinoma of the lung 4. Hepatocellular carcinoma 5. Sarcomas 6. Neuro-endocrine tumours 7. Anaplastic thyroid carcinoma which is Grade 4 by definition, at diagnosis. 8. Suspected brain tumours where MRI is more sensitive and specific. 9. Tumours with large mucinous components. 10. Lobular carcinoma of the breast										
	In addition to these tumours, imaging should be used with caution in patients who are diabetic or who have recently used high doses of cortico-steroids.

	GENERAL RULE GOVERNING ULTRASONIC EXAMINATIONS DURING PREGNANCY	
	Ultrasound examinations The international norm approved for use in South Africa for NORMAL PREGNANCY is two ultrasound exams: a. The first scan should preferably include a nuchal thickness estimation and be performed between 10 and 14 weeks gestation. The second scan should be performed between 20 and 24 weeks and should include a full anatomical report. All subsequent ultrasound scans are excluded from the benefits of medical schemes unless accompanied by proper motivation. An ultrasound scan to assess an abnormal early pregnancy may be formed before 10 weeks but this scan may not be used to diagnose a normal uncomplicated pregnancy. Item 3618 is a gynaecological scan and its use is not approved for use in pregnancy. b. In cases where the scan is performed by the attending practitioner, a clear indication for such a scan must be entered on the account rendered, or a letter of motivation must be attached to the account (the practitioner must elect one of the two options). c. In case of a referral, the referring doctor must submit a letter of motivation to the radiologist or other practitioner doing the scan. A copy of the letter of motivation must be attached to the first account rendered to the patient (by the radiologist or the other practitioner doing the scan) and must be attached to the first account submitted to the medical scheme by the patient or the doctor, as the case may be. d. In case of a referral to a radiologist, no motivation should be required from the radiologist.
